

The SciServer vision addresses some of the most important challenges of modern science.

### Petabyte-scale Data Management

We offer scalable data storage for scientific users, we deliver tools for searching big datasets, and we provide space for users to store and analyze their results.

### Open Numerical Laboratories

We offer the ability to analyze data on our servers, keeping the computation close to the data to minimize data movement.

### Science for All

We provide access to query, analysis, and storage resources to researchers and educators worldwide, and support the Long Tail of Science: the preponderance of small datasets collected by researchers worldwide.

SciServer's core goals are

- ♦ To revolutionize the availability and accessibility of large-scale data-intensive science to the scientific community.
- ♦ To leverage and build upon our joint development history of SkyServer with Johns Hopkins University.
- ♦ To develop SciServer to provide the same unique capabilities across the scientific spectrum.

### SciServer is Operated By

The Institute for Data Intensive Engineering  
and Science

The Johns Hopkins University  
Baltimore, MD 21218

### SciServer is Funded By

The National Science Foundation through its  
Data Infrastructure Building Blocks (DIBBs)  
Program, Award ACI-1261715.

A Collaborative Research Environment for  
Large-Scale Data-Driven Science

idies

*SciServer is a revolutionary new approach  
to doing science by bringing the analysis to  
the data. SciServer consists of integrated  
tools that work together to create a full-  
featured system.*

# Collaborative Data-Driven Science

## CasJobs

A query management and scheduling tool for large scientific datasets that provides users with up to a few GB of persistent storage space.

## Dashboard

The Dashboard...

## Compute

Brings SciServer to your browser with Jupyter Notebooks deployed in Docker containers.

## SkyServer

The public interface to SDSS catalog data. SciServer users can save SkyServer results and queries.

## SciScript

An integral part of SciServer Compute, SciScript libraries contain functions to access SciServer APIs, and more.

## SciDrive

A Dropbox-like interface for scientific data files that integrates with CasJobs and Compute.

## SkyQuery

Provides distributed query capability to support "statistical cross-match" queries across multiple astronomy databases.
